

Wild CranFlush™

Wild & raw handpicked cranberries

Healthy kidney and bladder support*

The original far northern Canadian wild high-bush cranberry extract. Every small batch is hand-picked and charged with the Sun's energy. The highbush cranberry is a medium height shrub, growing 8 to 15 feet tall on average and spreading roughly 10 feet. The fruit is ¼ to ½ inch wide and it turns bright red when ripe. Because it's raw, 100% of the nutrients and enzymes are fully intact, which is why it is so potent even in small amounts for supporting overall urinary tract function.* It is preserved with premium spice oils, and free of harmful additives. There is no need to refrigerate, since this product will remain stable when kept in a cool dark place at room temperature.

Cranflush provides support for the kidneys, bladder, and urinary tract.* For best results, pair the wild cranberry with wild oregano p73. It also supports the body's healthy response to inflammation.* Additionally, use it for a healthy blood pressure response.* Soothing to an upset stomach, it also supports a healthy, smooth menstrual cycle.* Traditionally, extracts of the high bush cranberry were used for muscle cramps, sore throats, and constipation.

- The only shelf stable wild & raw highbush cranberry extract available
- Higher antioxidant content than commercially farmed varieties
- Supports a healthy bladder, urinary tract, and kidneys response*
- Supports a healthy immune and digestive function*
- Convenient and easy to take, making for an ideal on-the-go product

Wild, high bush cranberries are richer in antioxidant content than the average farmed variety, especially proanthocyanidin antioxidants, which are essential for overall cellular vitality.* In fact, the antioxidants levels in the high bush cranberries are among the highest of all edible berry species. Naturally abundant in immune supporting quercetin, this is the ideal way of getting the most out of your cranberries.* Adding to its dense nutritional profile are vitamin A, B9, C, potassium, manganese, lutein, and zeaxanthin.

Directions: Take ½ dropper twice in juice or water daily as needed. Or take it undiluted sublingually. 88 servings per container.
